

SEPTIC TANK LOCATION

If you are standing at the edge of the middle of the concrete pad (leading up to PREVIOUS LOCATION of the apartment stairs when they were in front of house), and draw a straight line, the main septic tank is located 17.5 ft down the driveway. It is buried 2 feet deep under the driveway (the secondary tank is located to the left of this tank in the area off the driveway that is currently covered with mulch).

Or if you are standing at the clean-out drain (located just to the left of that small climbing hydrangea plant as you face the spigot between the garage doors and mudroom door), you would draw an angled line and the primary tank is located 34 feet from that cleanout cap going towards the driveway. Just another way of measuring to get to the same spot.

I did show Scott the day before closing where the tank is located but it's easy to forget stuff like that, so these measurements should help. Also, we use Papa's Septic and Troy has serviced our septic tank several times so he typically has a good sense of where it is located.

If you are standing at the edge of the concrete pad leading up to the apartment stairs, you would measure 21 feet 5 inches from the middle part of that pad in a straight line and you'll locate the tank.

The tank is 2 feet below the surface.

There is currently a tree that makes a good cross reference, it is 17 feet 5 inches from that tree.
