Address: _____ Invoice #: _____

This warranty is limited to the location supported by the piers installed by Quality Foundation Repair (QFR). QFR does not provide a warranty on any previous work performed on the foundation. This includes pre-existing Piers. Structural changes to the building after the completion of the work will void the warranty unless stated otherwise. The owner may be required to provide a structural engineers evaluation prior to warranty work. If plumbing leaks, water intrusion or adverse drainage conditions occur then the warranty will not be honored as any movement in the soil through a change in moisture levels can affect the foundation. This warranty is transferable to any subsequent new owners within 30 days of the sale/escrow closing by contacting QFR in writing and paying a \$200 processing fee unless stated otherwise.

For Pier and Beam Foundation Repair: The workmanship and materials installed have a five-year warranty where ever supported by QFR steel T-bracket Pier. This warranty is limited to the location supported by the piers installed by QFR. QFR will at no cost to Owner correct defects in workmanship and/or materials if settling is greater than 3/4 inch occurs.

For Slab Foundation Repair: QFR will warrant workmanship and materials for the life of the foundation. This warranty is limited to the location supported by the piers installed by QFR. QFR will at no cost to Owner correct defects in workmanship and/or materials if settling greater than 3/4 inch occurs. A "passed" hydrostatic plumbing test is required to validate warranty and must be completed within 60 days of the foundation repair completion date. T-bracket slab support piers are not covered under warranty as 8000psi pressure will not be reached.
