Owens Corning® PROPINK® L77 Loosefill Insulation

Owens Corning will accept no responsibility when the product is not installed in accordance with the product label. Stated R-value is provided by installing the required number of bags at a thickness not less than the labeled minimum thickness. Installation of the required number of bags may yield more than the specified minimum thickness. Failure by the installer to provide both the required bags and at least the minimum thickness will result in lower insulation R-value.

Specification for Open Blow Attics

New Construction Retrofit

Number of bags used

30

Estimated R-value of previous insulation

Area of coverage (sq. ft.)

1,797sqft

Other type(s) of insulation in attic

Thickness of insulation

13.25

Depth of previous insulation

Coverage charts are based on a nominal net bag weight of 32 lbs.

Loosefill insulations vary in thermal performance due to factors such as aging, mean temperature, settlement, convection, moisture absorption and installation variation. Convection in glass loosefill insulation installed in open attics can reduce its thermal performance in extreme winter temperatures during the heating season.
