Check the box if this ROOM is RULED OUT for encapsulation because there are 3 or more surfaces with adhesion problems and/or 3 or more loose A/M surfaces

EXPLANATION OF LEAD INSPECTION / RISK ASSESSMENT REPORT FORM COLUMNS

This page provides general information needed to understand the lead inspection/risk assessment report. However, you should speak with the inspector/risk assessor before you start to do any work on your home.

SIDE	Refers to A, B, C, or D side of the building or room. See the diagram on the cover sheet. The "A" side of the building or room is the side facing the street that gives the property its address (usually, it is the front of the building). Keeping your back to this street, from the "A" side move clockwise to the "B" side on your left, the "C" side opposite you, and the "D" side to the right. Numbering is from left to right.
LOCATION/ SURFACE	Refers to the building component(s) being tested. Some surfaces may be made up of more than one part. For example, "Baseboard" may refer to four separate pieces of wood (one on each wall), but is still considered one surface.
LEAD	<p>The actual lead result. Each surface tested must have a result recorded in the "Lead" column.</p> <ul style="list-style-type: none"> <li>• A number shows that the surface was tested with an XRF analyzer. A number (or average number) equal to or greater than 1.0 mg/cm<sup>2</sup> is a dangerous level of lead.</li> <li>• A "pos" or "neg" shows that the surface was tested with sodium sulfide. "Pos" means that there is a dangerous level of lead.</li> <li>• "N/A" means that the inspector was not able to test the surface. Unless the owner can get a sample to test, the inspector must assume the surface contains lead and require it to be delead, if necessary.</li> <li>• "MET" or "MR" means that a metal surface was not tested and only needs to be intact, even if it is a leaded surface. However, metal handrails, metal window sills, and metal railing caps, need to be delead if they test equal to or greater than 1.0 mg/cm<sup>2</sup>, or is marked "N/A."</li> <li>• For key to abbreviations like "COV", "VB", "VR" or "MR", "NC", "Tile", "DC", see the cover page.</li> <li>• When a component box is slashed and there are test results above and below the diagonal line, the result on the "bottom" represents results below 5 ft. and the "top" result indicates the test result above 5 ft.</li> </ul>
TYPE OF HAZARD	<p>Not all lead paint must be delead. This column tells you IF and WHY a surface needs deleading. The deleading standards below may not apply for Interim Controls. Speak to your risk assessor for more information.</p> <ul style="list-style-type: none"> <li>• "M/I" circled means that the surface is a moveable/impacted surface and must be delead in its entirety.</li> <li>• "SF" circled indicates that there is a storm frame present which requires the blind stop and exterior sill be delead as interior moveable / impacted surfaces.</li> <li>• "A/M" circled means that the surface is "accessible mouthable" and must be delead to a minimum of five feet high, four inches in from the edge or corner.</li> <li>• "L" circled means that the surface is loose and must, at minimum, be made intact.</li> <li>• If more than one choice is circled, the rules for deleading may change depending upon what method of deleading you choose. Speak to the inspector for more information.</li> <li>• "N/A" means the inspector was unable to determine if the surface was a lead hazard. The person doing the deleading must check this surface and follow all the rules for deleading. Speak to the inspector for more information.</li> <li>• If nothing is circled in the column, then it is likely the surface does not need deleading. Speak to the inspector for more information. Remember, this does not mean the entire surface is lead free, it just does not require deleading in its current condition.</li> </ul>
URG HAZ?	This column is only completed during a risk assessment. A risk assessment is an evaluation of a home's suitability for Interim Control. <b>Only a licensed risk assessor can do a risk assessment, not all inspectors are risk assessors.</b> If "Y" is circled, then this surface is considered an "Urgent Lead Hazard" and some type of deleading work is required to qualify for Interim Control.
IC DATE	The date the licensed risk assessor determines the surface meets the standards for Interim Control.
IC METH	The deleading method or structural repair done to qualify the surface for Interim Control. Refer to the deleading codes key on the cover page.
DELEAD DATE	The date that the lead inspector reinspects the surface and finds that it has been successfully brought back into compliance.
DELEAD METH	The method used to bring a surface into full compliance. Refer to codes in the Key on the cover page of the PCAD
EXCLUDED SURFACES	The amount of loose paint on a surface as measured by the lead inspector. "N/A" means that the inspector was not able to measure the loose paint, but has determined it is more than the cut-off for moderate risk making intact.
