Description of work

At my arrival home is a vacant. Opened lock box & begin checking unit. I found blower motor running but not compressor. I checked dual cap 45/45 & fab motor is an evergreen which doesn't require a capacitor. I checked lug nuts on disconnect box, looked for any bad jackets on high voltage insulation compressor or crankcase heater, condenser fan motor & lugs on heat breakers are tight. Turned unit in found good compressor amps, condenser fan motor amps, dual capacitor & pressures are normal 114/302 16sh. Unit has an old breaker panel & breaker can be going weak. I'll send invoice to home owner. Unit is operating on cooling & heating.

Name	Description	Quantity	Price	Total
1001-050 Diagnostic Fee *	Diagnostic fee:	1.00	\$95.00	\$95.00
