Well Inspection 7/23/20 Water System: The well is to the southwestwest of the house, 4 ½" PVC casing , location lat N 36deg 22.854' long W105 deg 38.449'. In the mechanical room in the house there is a pressure tank Champion CH 10050 with good air charge and a control box for a 1/2 hp pump. The pump starts and runs normally drawing 5.96 amps at 247/248 volts dynamic/static. With all the faucets running the house draws 11 gpm and the water system output exceeds this figure. At the well casing the power wire should be in conduit or otherwise protected from UV. One should request the State Engineer-approved well permit from the seller, and one should transfer well ownership when the property transfers. I was given documents for well RG-83310 which is registered at the state engineer's office as 140' deep drilled in 2005 by Roy Graves currently owned by Felipe Rodriguez with rights to 3 acre-feet/year. Bacteriological test: The water sample, taken from the kitchen sink, was negative for coliform bacteria.		\$295
