

Solar System for 421 Bluffview Dr, Wimberley, Tx 78676 (as per seller)

System was installed by Freedom Solar in Austin ([freedomssolarpower.com](http://freedomssolarpower.com)).

System is documented in the supplied pdf along with last year's PEC usage.

The Tesla battery system will power the home and cabin for approx. 12 hours with the heat pumps from the house is not being backed up. The heat pump in the cabin is on backup in case of long cold spells and should be turned off, if not needed during a power failure.

Solar panels were placed on the house and cabin so as not to detract from looks of the property from the front access.

The solar system installation was completed at the end of Dec and PEC usage shows the power used and power sold back.
